Highly Awarded? Of Course

When you put in the effort to do things right, people and institutions tend to notice. Our bootcamps have been recognized by Career Karma, Course Report, and Fortune Education, among others. Is this because our curriculum is designed to dive deep into the material while providing students with the support they need through our tutors? Or maybe because we provide all-around support and job-search guidance? Regardless, it all comes from one simple driving motive—we always strive to do right by our students and graduates.

Welcome!

As Chief Product Officer, I lead the teams that deliver the TripleTen experience to thousands of students. Every aspect of our product is designed to be **beginner-friendly and built for job changers**—from the custom, hands-on, interactive curriculum to our in-house platform serving AI-powered hints to our Learning and Career Coaches who help each and every student construct personalized study and job search strategies. We want everyone, of all backgrounds, to be able to start successful careers through our programs.

We are dedicated to being **the best pathway into tech for career switchers**. The report you're about to read is a snapshot of where TripleTen was. The world of tech is constantly changing—so we are constantly improving our programs to ensure that our graduates are prepared.

In 2024, for example, that meant supplementing our existing career services to address the more challenging job market, going above and beyond the CompTIA Security+ standards in our new Cyber Security program, and offering every student a free course in generative AI.

Next year that might mean updating our Data Science technical stack with cutting edge AI/ML libraries, integrating best practices for using AI tools into our main programs, and offering career coaching much earlier in the program.

We look forward to graduating many more students, **changing more lives, and reporting on more excellent outcomes in the years ahead.**

A handwritten signature in black ink that reads "Elise Deitrick".

Elise, CPO at TripleTen

Methodology

The data that went into this report was collected by our career team during their follow-up with our students and graduates.

We calculate our employment rate by taking the total number of students and grads (graduated between July 2023 and June 2024) employed and dividing it by the total number of employed grads, employed students, and money-back-eligible grads who didn't find a job within six months.

Our program is centered around learning both how to do the job and **how to get the job**. Post-graduation follow-through is crucial to success. To be eligible for our money-back guarantee, a grad has to make a good-faith effort to find a job.

That means completing all of their job-search prep milestones, like going through interview coaching sessions, getting their resume and LinkedIn reviewed, etc. It also means following their career coach's plan for landing a job—applying to relevant positions and networking.

Median salary calculations were based on aggregate data from our grads/students, from the same time period as the employment rate calculation.

How we calculate our employment rate:

ER = Employment rate

MGB = Money-back guarantee

AJSP = Active Job Search Period

$$ER = \frac{\text{Employed students} + \text{Employed graduates}}{\text{Not employed MGB-eligible graduates who completed AJSP} + \text{Employed students} + \text{Employed graduates}}$$

ER= All employed students and graduates in relation to everyone who has completed the active job search period, are not employed and didn't lose their MBG eligibility, plus those who found a job regardless of AJSP completion.

Employment outcomes

What happens after you graduate.

Employment

82%

of graduates secure a tech job within 6 months of program completion*

\$70k

is the median salary after graduation*

\$20k

average salary increase*

Employment types

One of the best things about working in tech is the prevalence of remote and hybrid positions. Over 1/3 of our employed grads have been able to escape the office entirely, with an almost equal number able to work remotely part of the time.

Industries

Tech jobs aren't all...in tech. As in-house development becomes the norm in "traditional" industries, many of our grads are finding that their previous experience is relevant in their new jobs.

This is evident in the incredible diversity of industries that our grads are employed in.

Services and Retail

*Refer to the Methodology section on page 4 to see how we calculated these numbers

For our grads, the question isn't "will anyone hire me?" Rather, it's "where will I choose to apply myself?"

TripleTen alumni get hired by big tech companies, startups, brick-and-mortar industries, local governments, educational institutions, and every kind of employer in-between.

Our students

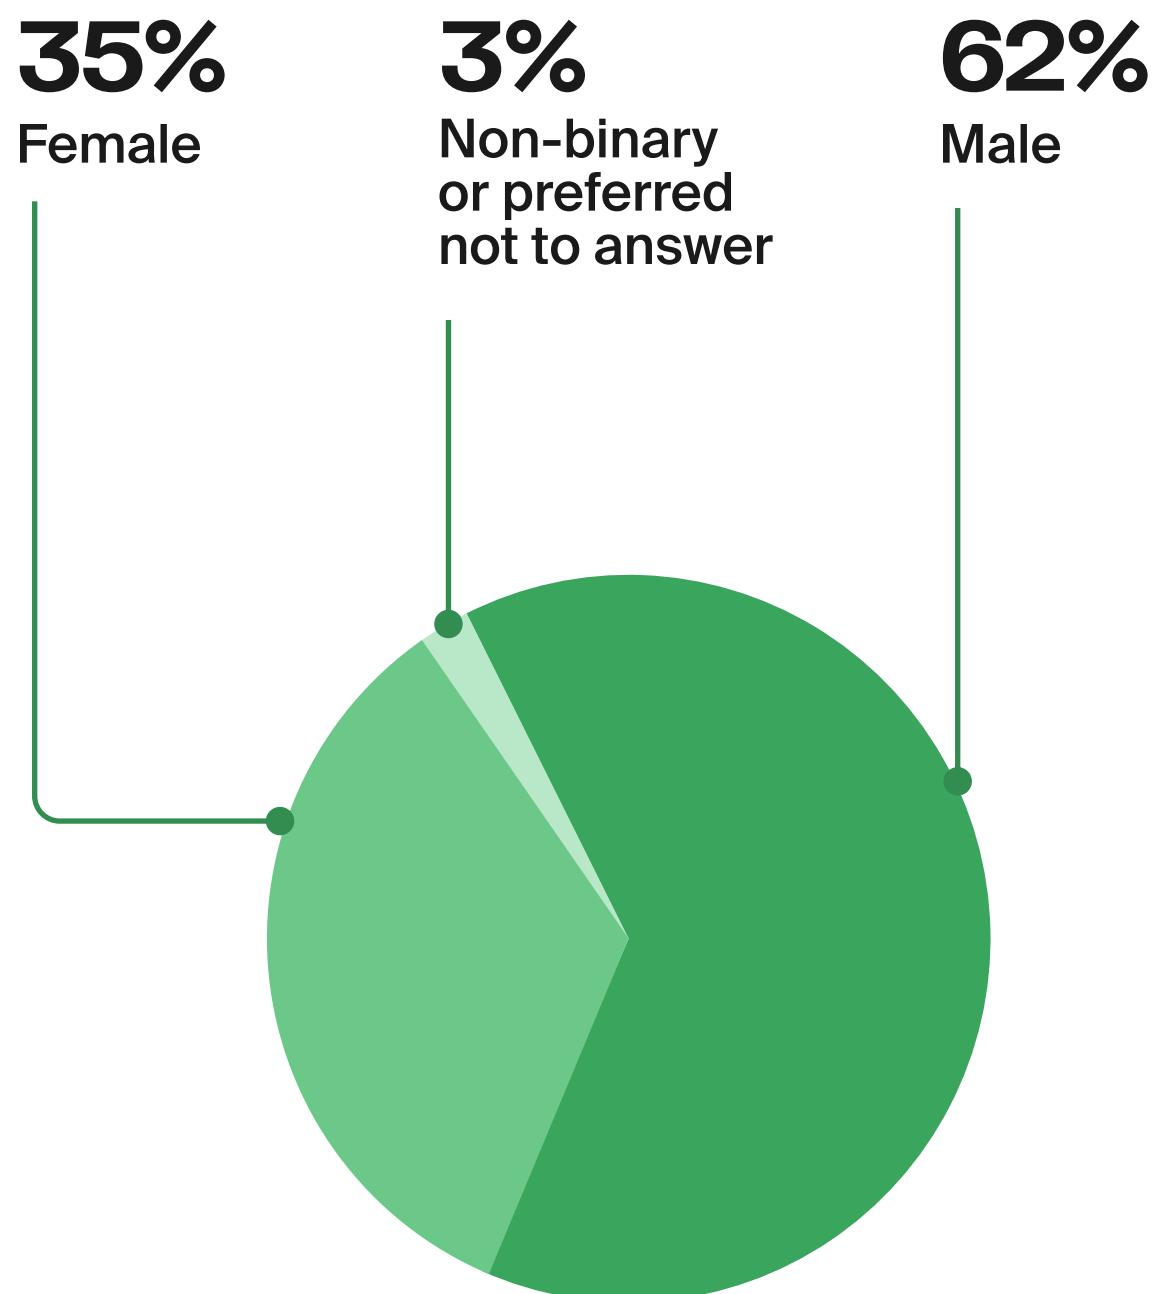

A demographic snapshot

Demographics

1.1k+

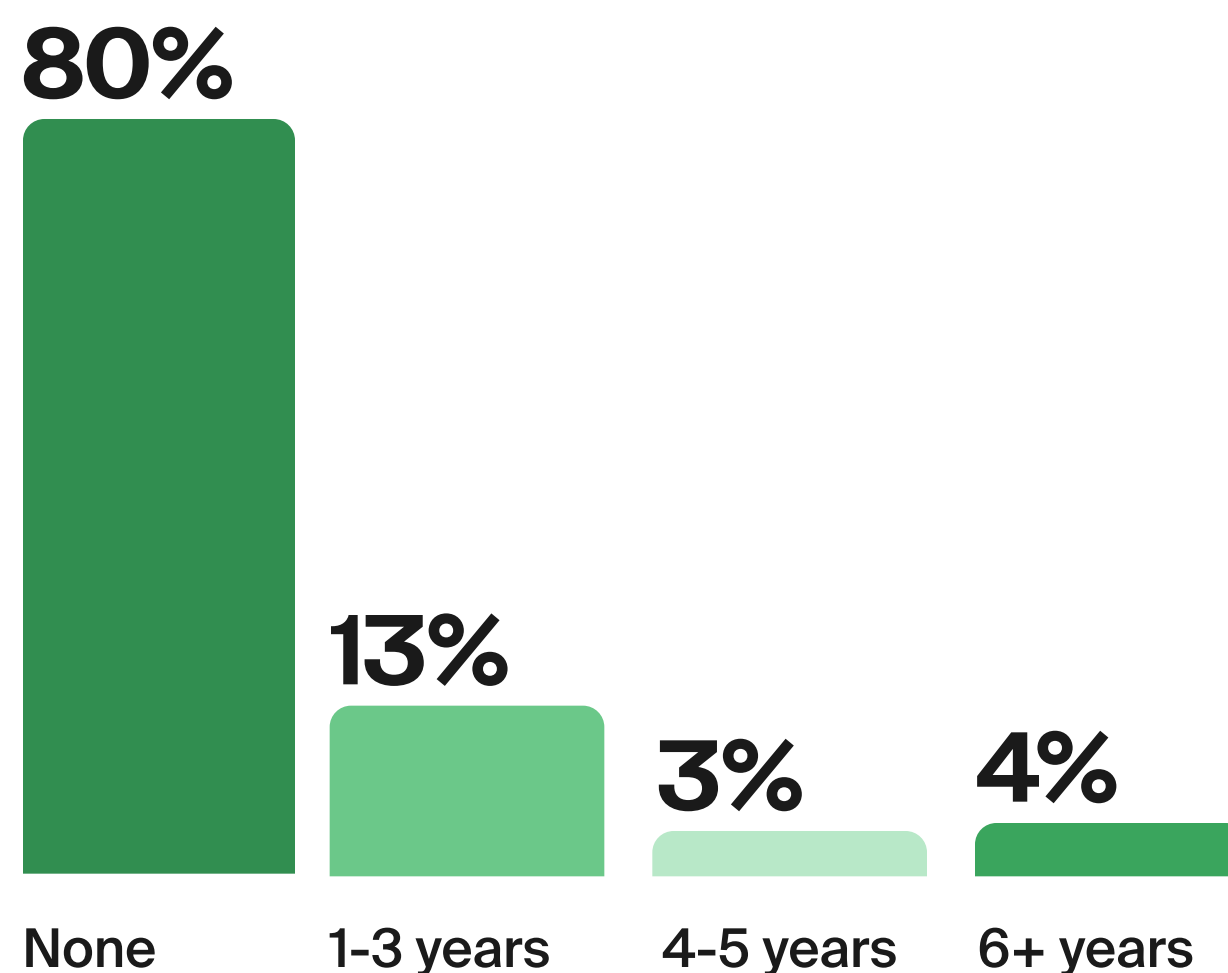

graduates and counting

Gender

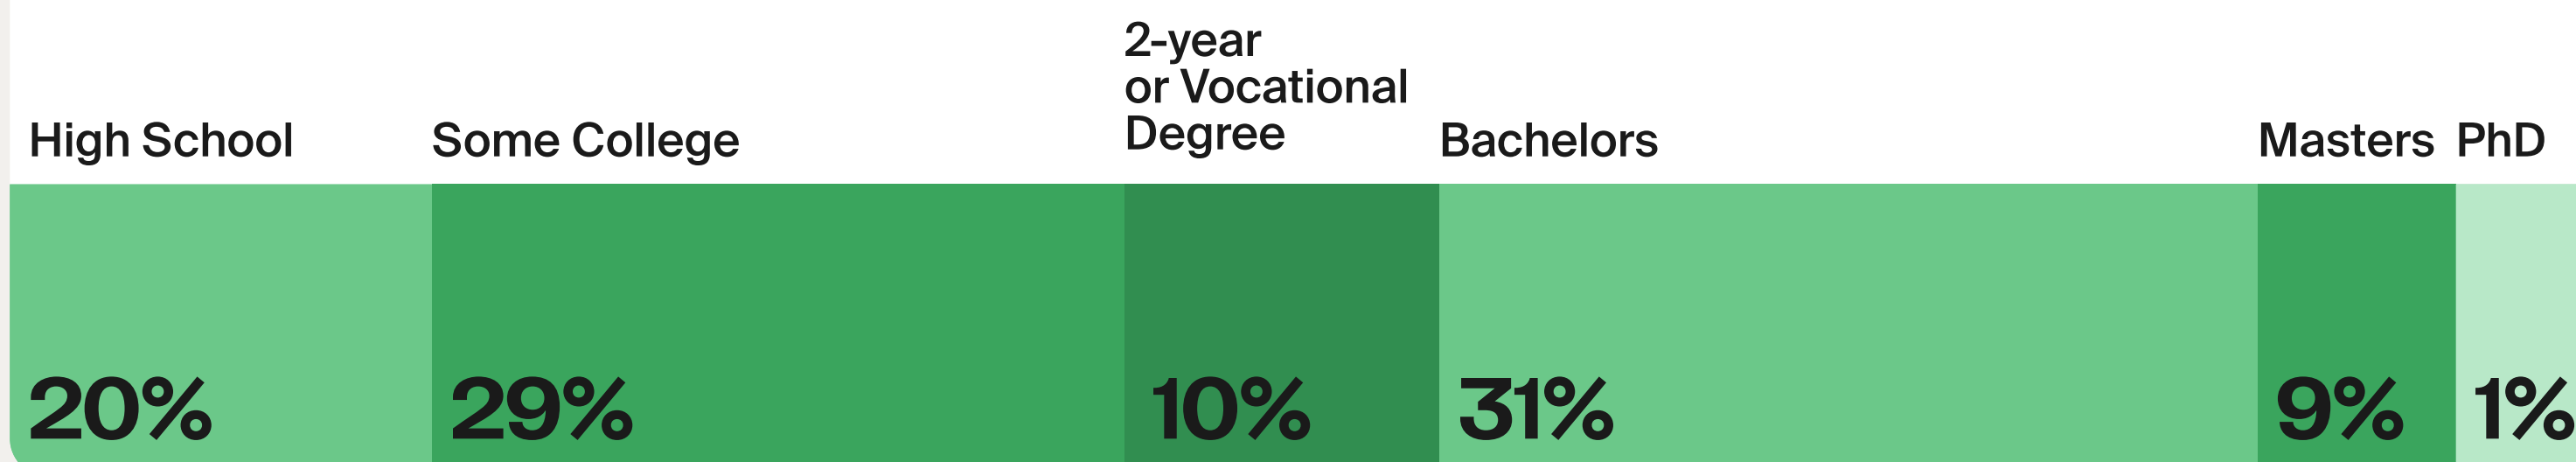

Prior experience in tech

We ask our incoming students where they're coming from. The overwhelming majority are brand new to the tech space.

Education

People from all walks of life come to TripleTen to learn skills to launch a tech career or help them go further. That includes an almost equal number of Bachelor's degree holders and folks who went to college but realized that it wasn't for them. We also see a lot of high school grads, and a fair number of grad degree holders.

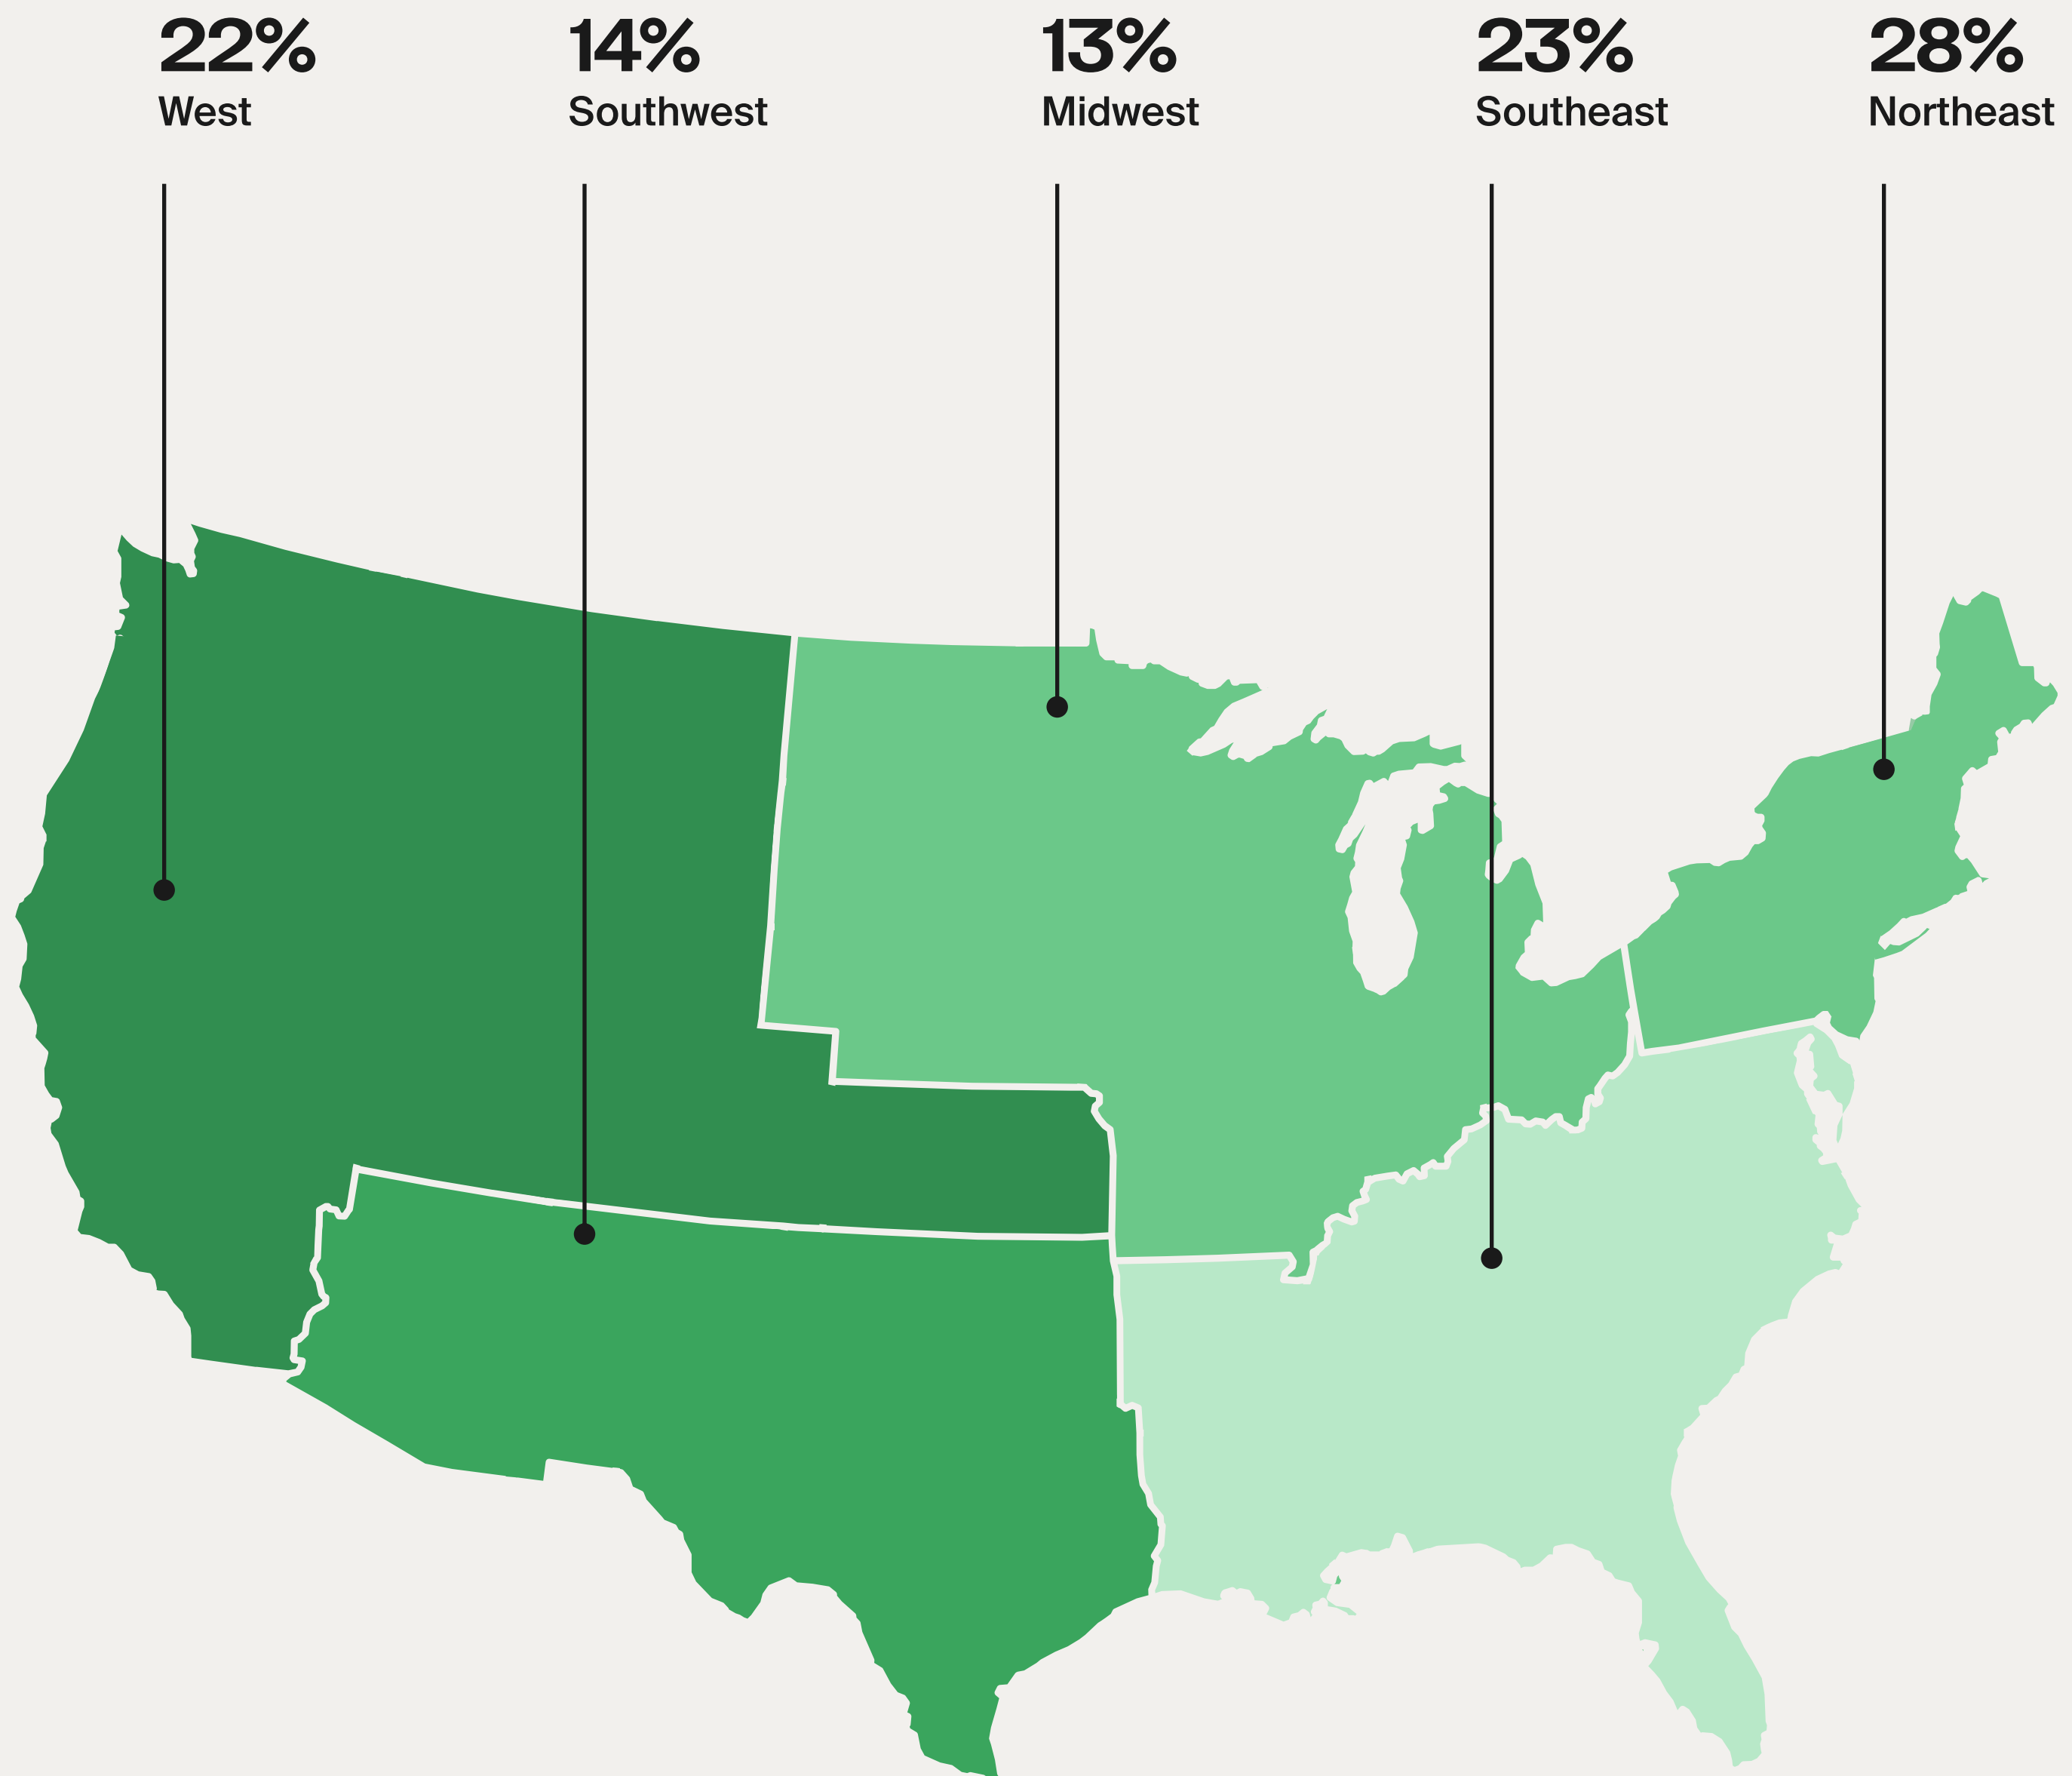

All numbers are current as of December 2024, collected from incoming students over our 5 years in operation.

Students by Region

The TripleTen community draws on a tremendous range of places, backgrounds, and lived experience. Our students come from 48 US states, as well as Washington, DC, and Puerto Rico. We've also seen a number of international students, mostly from Europe, go through our US-focused bootcamps.

New York
Florida

Our Bootcamps

The disciplines, tools, and skill stacks
TripleTen students come to learn.

Why TripleTen Students Succeed

Unmatched job-search support

- Our graduates are employed at 70+ companies across the US
- Our students receive an average of 12+ hours of one-on-one career coaching
- 300+ new relevant job opportunities appear on our job board daily

Hands-on learning

- Students learn by doing, building projects drawn from real business cases
- All projects are reviewed by working professionals to meet industry-standard best practices
- 500+ students engaged in business projects delivered to externship partners

Financially friendly

- TripleTen works with financing partners to make career transitions more affordable
- Money-back guarantee: if you graduate and follow our plan* for landing a job, but don't secure a relevant position within ten months, we will refund your tuition
- All our bootcamps are affordably priced and provide industry-leading value

Grad Success Stories

Real people, real careers, real lives
changed.

Software Engineering

Our Software Engineering grads arrive prepared for the real-world demands of their roles. They know how to code to industry standards, are prepared for code review, and thrive in both development and support roles.

Grad job titles:

Full-stack Developer

Front-end Developer

Back-end Developer

Web Developer

\$70,000

Median grad salary

\$15,000

Median salary growth

Jeremy Rivera from warehouse picker to Developer Advocate

“The externship was for a real company, making a project they could implement and use. With a team of 12 students, we built the front end on an app and built the user experience for that app. Especially when you start learning, you need that extra experience. The hands-on experience at TripleTen was invaluable.”

Jeremy Rivera

[Read story](#)

Jeremy's career path

Data Science

TripleTen Data Science grads are trained on real industry cases, so they show up ready to support their employers with complex statistical analytics and predictive models.

Grad job titles:

Data Scientist

Data Analyst

ML Engineer

Research Scientist

\$83,750

Median grad salary

\$23,750

Median salary growth

Rachelle Perez from tourism sales to Data Scientist

“Being able to talk with professionals quickly became my favorite part of the learning. Once you do that over and over again, it becomes more of a two-way communication. I would leave comments for my reviewer, my reviewer would reply to my comments, and then I would add extra questions. So, those code reviews became a way to show that I was actually progressing.”

 Rachelle Perez [Read story](#)

Rachelle's career path

Tourism sales

Graduated
from TripleTen

  Data Scientist
at Spotify

BI Analytics

TripleTen BI Analytics grads have the full set of skills needed to be “the numbers person.” They know how to get, process, and talk to the data in ways that provide real value to business.

Grad job titles:

BI Analyst

Business Data Analyst

Business Analyst

BI Developer

\$66,000

Median grad salary

\$19,920

Median salary growth

Sheldon Kinsler from salesman to Business Analyst

“I was able to get through it just thanks to the tutors and the community. Everyone's super helpful and will answer pretty much any question you have.

The non-technical parts of the job, I'd say those are some of the best things that I learned. They helped me land a job.”

 Sheldon Kinsler [Read story](#)

Sheldon's career path

Quality Assurance

Our QA grads know how to test digital products and document the results so they're useful to their development teams. They come out knowing automation, which makes all the difference in today's job market.

Grad job titles:

QA Engineer

QA Automation

QA Analyst

Software Tester

\$63,250

Median grad salary

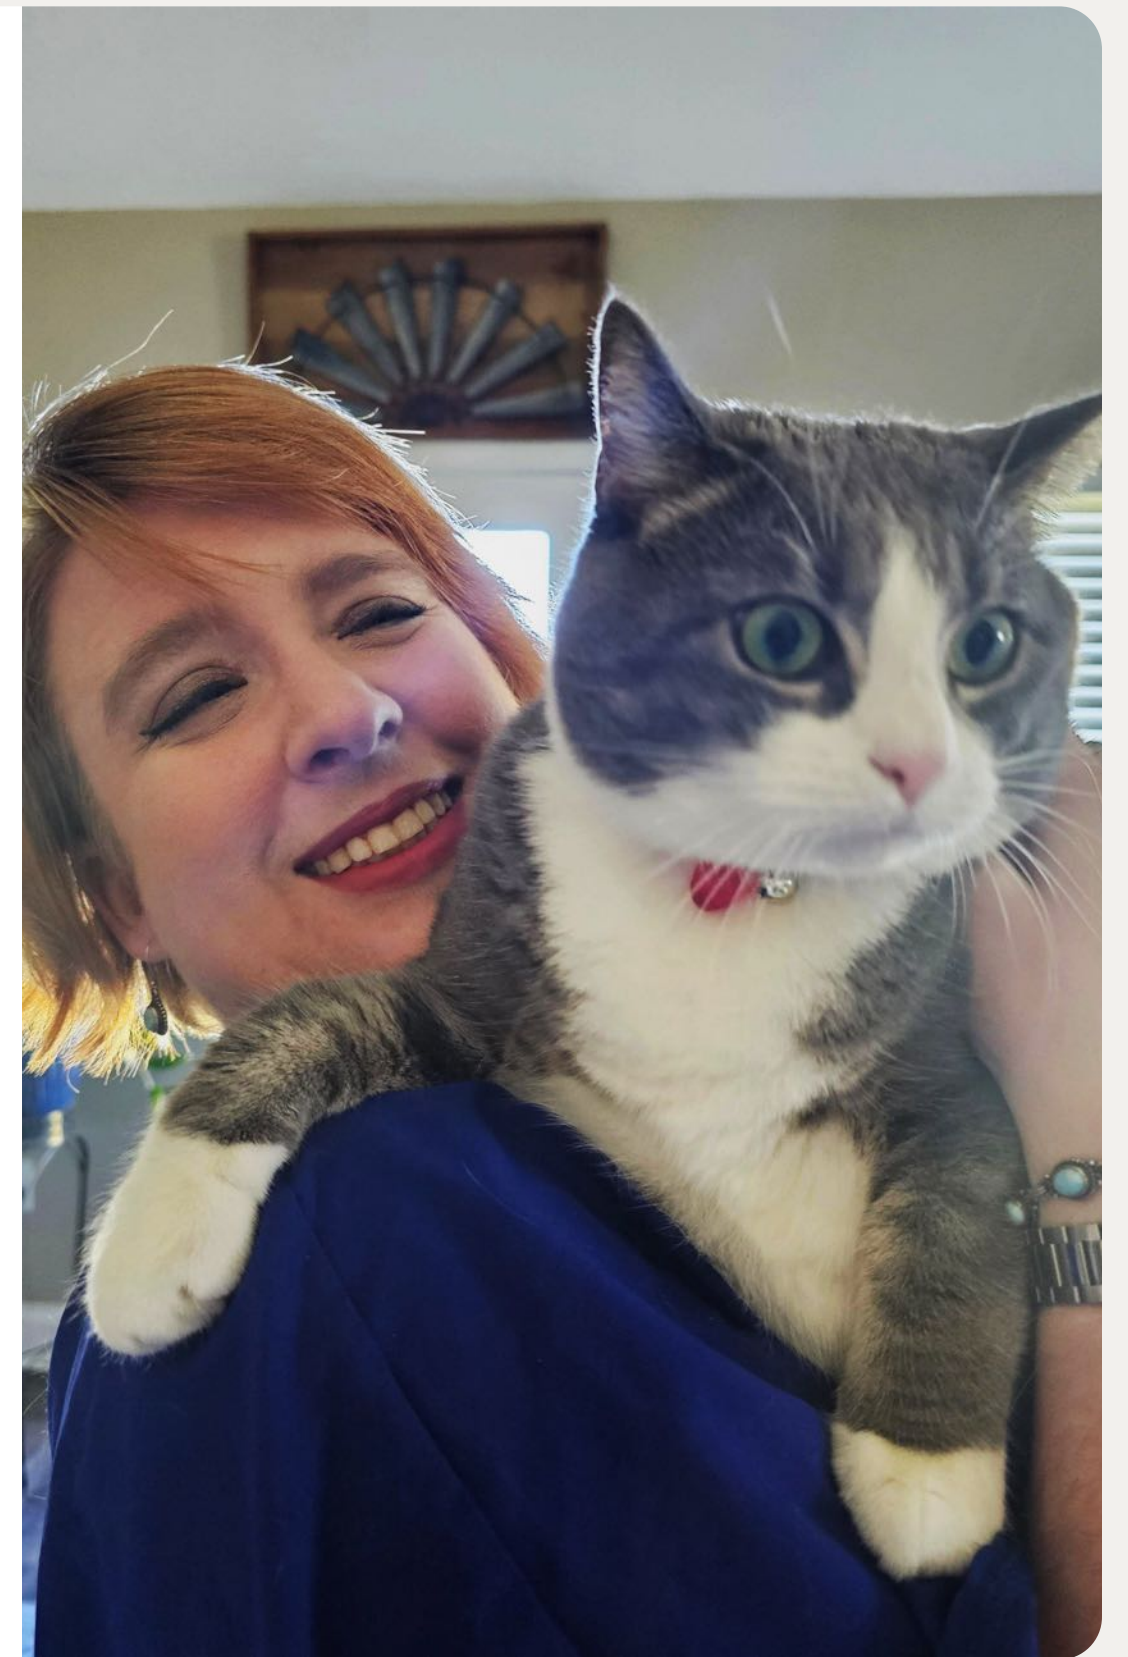

\$13,250

Median salary growth

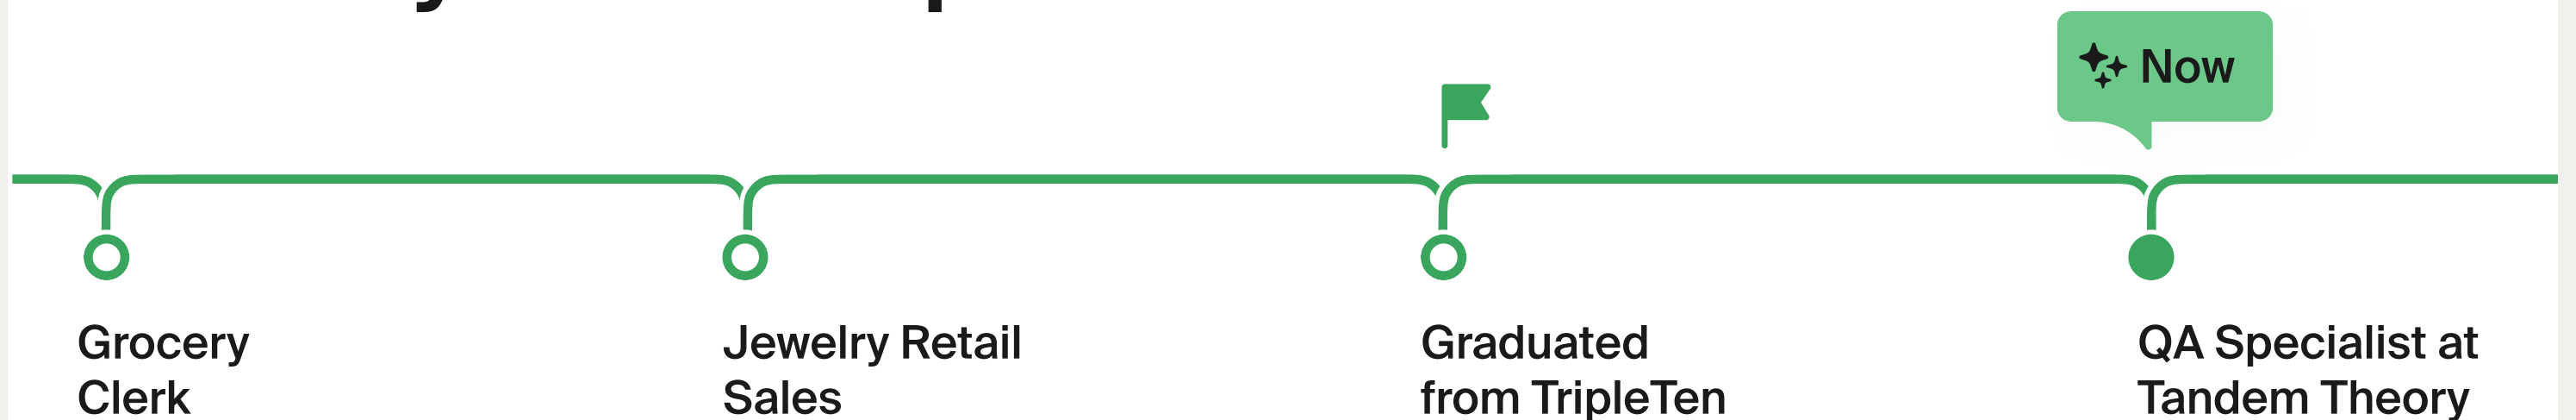

Jessica Powers from retail sales to QA

“Learning something new can be stressful, but it was probably one of the least stressful learning experiences I've ever had. Having somebody, both for guidance and for moral support, helps so much.”

 Jessica Powers [Read story](#)
